

WHEN WE SAY SUPERIOR, WE MEAN SUPERIOR

Trojan Battery Company's finest marine line is called the Superior Cycling Series for good reason. One glance at the specs shows you why. Trojan's SCS225, for instance, runs for 7.1 hours at a continuous draw of 15 amps. Its 20-hour rate is an extraordinary 130 amp hours. And it delivers 373 Lifetime Energy Units™ (LEUs™), the highest rating of all our marine batteries. (For a more detailed look, see the charts on the reverse side.) These unparalleled performance levels are the direct result of exceptional engineering, continuous manufacturing refinement, and exclusive

product features. These include Trojan's exclusive Alpha Plus™ Paste Formulation with the industry's highest concentration of active materials, as well as the Maxguard™ Advanced Design Separator for enhanced electrolyte flow. Together, they add up to more life and greater value.

If you're serious about seeking nothing but the best, insist on Trojan Superior Cycling Series in the bold maroon case. And if you'd like an all-Trojan power system, check into our high-performance, ultra-reliable starting batteries too.

Look for LEUs to make deep cycle battery comparison simple.

Pioneered by Trojan, Lifetime Energy Units™ are an accurate, convenient way to compare the relative value of one deep cycle battery to another. Simply stated, Lifetime Energy Units (LEUs) signify the number of kilowatt-hours of energy a battery delivers over its useful life. The bigger the number, the more work the battery can perform. Yes, it's that simple!

TROJAN MAKES SELECTING THE RIGHT BATTERY EASY

Typical Amp Draw of Various Running Gear (at maximum current)

Tournament Rigged Bass Boat		Saltwater Fishing Rig	
Item	Amp Draw	Item	Amp Draw
Trolling Motor	15	Bilge pumps	6
Bilge pumps	6	Livewell pumps	5
Livewell pumps	5	Radar	5
Running lights	5	Running lights	5
Depth finder	1	Two-way radio	3
		Depth finder (LCR)	1
		Positioning system	1

To select the Trojan deep cycle battery which meets your requirement, add up the amp draw of your running equipment (see chart above). Locate the total Amp Draw on the Run Time Chart. Select the running time you require from the left side of the chart. The Trojan battery which matches your requirement is shown at the intersection of the Amp Draw and Run Time lines.
